Exhibit-17-Chris-Hood—additional-evidence.pdf

Pages 6&7 last two units of land in the study witch are the Nelson property 29-14-19-200 and the Leff properties 29-15-24-500 & 29-15-25-100. It states this land appears it isn't used for farm or forest production! This is wrong as I've been farming this property for the past 34years running livestock, irrigation, cutting hay, pasture leasing & blueberries. Nelson Family Farms has leased my property for the past 14 years running livestock between his place and mine. I've been cutting hay since 1988 on this property as well and still do. Our blueberries are under irrigation as well as our pasturelands and what isn't; is done with a water wagon to protect our rights. Also we work with the City of Bandon having them apply bio solids to our pasture land that's been approved by DEQ.

I hope this is enough information to satisfy you.

Sincerely David Leff
